**Dear Parents,**

*We firmly believe* in the effectiveness of vaccines to prevent serious illness and to save lives.

*We firmly believe* in the safety of vaccines.

*We firmly believe* that all children and young adults should receive all the recommended vaccines according to the schedule published by the Centers for Disease Control and Prevention as well as the American Academy of Pediatrics.

*We firmly believe*, based on all available literature, evidence and current studies, that vaccines and preservatives such as Thimerosal do not cause autism or other developmental disabilities.

*We firmly believe* that vaccinating children and young adults may be the single most important health-promoting intervention we perform as pediatricians, and that you can perform as parents/caregivers. The recommended vaccines and their schedule given are the results of years and years of scientific study and data-gathering on millions of children by thousands of our brightest scientists and physicians.

These things being said, we recognize that there has always been and will likely always be controversy surrounding vaccination. Indeed, Benjamin Franklin, persuaded by his brother, was opposed to smallpox vaccine until scientific data convinced him otherwise. Tragically, he had delayed inoculating his son, Francis (“Franky”), who contracted smallpox and died at age 4, leaving Ben with a lifetime of guilt and remorse. Quoting Mr. Franklin’s autobiography:

*“In 1736 I lost one of my sons, a fine boy of four years old, by the smallpox taken in the common way. I long regretted bitterly and still regret that I had not given it to him by inoculation. This I mention for the sake of the parents who omit that operation, on the supposition that they should never forgive themselves if a child died under it; my example showing that the regret may be the same either way, and that, therefore, the safer should be chosen.”*

The vaccine campaign is truly a victim of its own success. It is precisely because vaccines are so effective at preventing illness that we are even discussing whether or not they should be given. Because of vaccines, many of you have never seen a child with polio, tetanus, whooping cough,

bacterial meningitis or even chicken pox, or known a friend or family member whose child died of one of these diseases. Such success can make us complacent or even lazy about vaccinating. But such an attitude, if it becomes widespread, can only lead to tragic results.

Over the past several years many people in Europe have chosen not to vaccinate their children with the MMR vaccine after publication of an unfounded suspicion (later retracted) that the vaccine caused autism. As a result of under-immunization, there have been outbreaks of measles and several deaths from complications of measles in Europe over the past several years.

Furthermore, by not vaccinating your child you are taking advantage of thousands of others who do vaccinate their children, putting your child at unnecessary risk for life threatening illness, disability, and even death, and making your child a potential public health risk.

We are making you aware of these facts not to scare you or coerce you, but to emphasize the importance of vaccinating your child. We recognize that the choice may be a very emotional one for some parents. We will do everything we can to convince you that vaccinating according to the schedule is the right thing to do. However, should you have doubts, please discuss these with your pediatrician in advance of your visit. Please be advised, however, that delaying or “breaking up the vaccines” to give one or two at a time over two or more visits goes against expert recommendations, and can put your child at risk for serious illness (or even death) and goes against our medical advice as providers here at English Road Pediatrics. Such additional visits will require additional co-pays on your part.

Finally, if you should absolutely refuse to vaccinate your child despite all our efforts, we will ask you to find another health care provider who shares your views. We do not keep a list of such providers nor would we recommend any such physician.

As medical professionals, *we feel strongly* that vaccinating children on schedule with currently available vaccines is absolutely the right thing to do for all children and young adults. Thank you for your time in reading this policy, and please feel free to discuss any questions or concerns you may have about vaccines with any one of us.

**Sincerely,**

The Providers at English Road Pediatrics
